KESHINI J A

AI / ML ENGINEER FRESHER | PYTHON DEVELOPER

Coimbatore, Tamil Nadu | +91 9488400598 | keshini.cbe@gmail.com | GitHub: keshinicbe-jpg

PROFESSIONAL SUMMARY

B.Sc. Computer Science (Artificial Intelligence) graduate (2026) with 87%. Built an intent-based customer service chatbot in Python using basic NLP and conversational logic. Familiar with data analysis and visualization using Pandas, NumPy, Matplotlib and Seaborn, with foundational knowledge of Machine Learning, Natural Language Processing and Generative AI. Python Web Developer certified (Tech4All, Cognizant Foundation, Grade A).

TECHNICAL SKILLS

Programming Languages: Python
Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, MS Excel
Artificial Intelligence & Machine Learning: Foundational knowledge of AI and Machine Learning concepts
Natural Language Processing: Basic NLP, Chatbot Development (applied in project)
Generative AI: Foundational knowledge of Generative AI (GenAI) concepts
Databases: SQL, MySQL
Development Tools: Jupyter Notebook
AI Productivity Tools: Microsoft Copilot

PROJECTS

AI-Powered Customer Service Chatbot **SEP 2026**

- Developed a Python chatbot to automate common customer service queries using intent-based logic and basic NLP
- Implemented intent identification and response handling for intents and support workflows.
- Tested query-response behavior using simulated customer interaction

Technologies: Python, Basic NLP, Jupyter Notebook

Customer Churn Prediction System **SEP 2026**

- Developing a machine learning application to predict whether a customer is likely to leave a service: data cleaning, EDA, missing-value handling and categorical encoding.
- Planned: train and compare Logistic Regression and Random Forest using accuracy, precision, recall, F1-score and ROC-AUC.
- Planned: identify the features that most influence customer churn.

Technologies: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Jupyter Notebook

AI-Powered Document Question Answering System (RAG) **SEP 2026**

- Developing a retrieval-augmented generation (RAG) application where users upload PDF documents and ask questions about their content.
- Planned: extract and chunk PDF text, generate embeddings and retrieve relevant chunks from a vector database.
- Planned: generate LLM answers grounded in the retrieved context, with source references or page citations.

Technologies: Python, LangChain (if used), embedding model (Hugging Face or other), FAISS or ChromaDB, LLM API, Streamlit.

EDUCATION

B.Sc. Computer Science (Artificial Intelligence) | 2026 | 87%
PPG College of Arts and Science, affiliated to Bharathiar University

Higher Secondary Certificate (HSC) | 2023 | 75%
Victory Vidhyalaya Matric Hr. Sec. School

CERTIFICATIONS

- Python Web Developer – Tech4All (Cognizant Foundation), ICT Academy | Grade A
- Microsoft Learnathon '25 – Microsoft Copilot
- Internet of Things using Arduino – NoviTech
- Problem Solving & Innovation – Wadhwani Foundation

SOFT SKILLS & LANGUAGES

Problem Solving | Team Collaboration | Leadership | Communication | Adaptability
Languages: English, Tamil,Telugu
